## Appendix D <Programming GPIO's>

The GPIO's can be programmed with the MSDOS debug program using simple IN/OUT commands. The following lines show an example how to do this.

```
GPIO0.....GPIO7  bit0.....bit7
-o 2E 87                ;enter configuration
-o 2E 87
-o 2E 07
-o 2F 09                ;enale GPIO function
-o 2E 30
-o 2F 02                ;enable GPIO configuration
-o 2E F0
-o 2F xx                ;set GPIO as input/output; set '1' for input,'0' for
output
-o 2E F1
-o 2F xx                ;if set GPIO's as output,in this register its value
                        can be set
```

Optional :

```
-o 2E F2
-o 2F xx                ; Data inversion register ; '1' inverts the current
                        valus of the bits , '0' leaves them as they are
-o 2E 30
-o 2F 01                ; active GPIO's
```

## Appendix E <Programming Watchdog Timer >

The watchdog timer makes the system auto-reset while it stops to work for a period. The integrated watchdog timer can be setup as system reset mode by program.

### Timeout Value Range

- 1 to 255
- Second or Minute

### Program Sample

Watchdog timer setup as system reset with 5 second of timeout

---

```

2E, 87
2E, 87
2E, 07
2F, 08      Logical Device 8
2E, 30      Activate
2F, 01
2E, F5      Set as Second*
2F, 00
2E, F6      Set as 5
2F, 05

```

---

\* Minute: bit 3 = 0; Second: bit 3 = 1

You can select Timer setting in the BIOS, after setting the time options, the system will reset according to the period of your selection.
